

MERA Project Moves Forward

The Marin Emergency Radio Authority Next Gen Project completed a significant milestone with the certification of the Subsequent Environmental Impact Report and approval of the Preliminary Design Plans for the Next Gen Project by the MERA Governing Board at their 12/11/19 meeting. With those two actions, MERA can now move on to complete the design and build this vital communications system to replace the current Gen I system.

As we begin 2020, we will be completing Customer Design Review with Motorola and moving on to the bidding of sites for construction. As updates to existing sites and build-out of new sites is accomplished throughout this

year, the installation of the new radio equipment may commence. More details on the project schedule will be available after completion of the Customer Design Review process in Spring, 2020.
